Harold Blinderman Authors Article in POWER Magazine Urging Early Preparation for Proposed EPA Rule

Harold Blinderman discussed a proposed Environmental Protection Agency (EPA) rule in a *POWER* magazine article, "Preparing for the EPA's Cooling Water Rule," published November 1. The rule pertains to the regulation of certain power plants and manufacturing facilities utilizing once-through cooling water systems, requiring these facilities to use the best technology available (BTA) to minimize entrainment and impingement. Determination of BTA will likely take a number of factors into consideration, and Harold writes that managers, owners and operators should start assessing and planning compliance strategies as early in the process as possible.
